

## CLAIMS

1. (Currently Amended) A cosmetic container comprising:
  - a container body;
  - a lid having a hinge portion coupled rotatably to the container body;
  - wherein the [[a]] lid [[that]] opens and closes the container body;
  - a replacement cover provided on the lid to cover the lid [[it]];
  - a through hole formed in the hinge portion and extending towards the replacement cover;
  - an engaging body formed on the inner surface of the hinge portion along ~~within~~ the through hole; and
  - an engageable body formed on the replacement cover that is inserted into the through hole to detachably engage the engaging body;
  - wherein the engageable body cover has a surface configured for receiving a force exerted through the through hole to flexibly deform the engageable body to disengage the engageable body from the engaging body, thus, releasing the engagement.
  
2. (Currently Amended) A cosmetic container comprising:
  - a container body;
  - a lid to open and close the container body;
  - a replacement cover provided on an outer surface of at least one of the lid and the container body;
  - a first groove recessed from an outer surface side of the lid or the container body;
  - an engaging portion formed inside the first groove;
  - an engageable portion which is flexibly deformable and formed on the replacement cover, and inserted in the first groove to detachably engage the engaging portion; and
  - a second groove recessed from an inner surface side of the lid or the container body and communicating with ~~connected to~~ the first groove,

wherein the engageable portion has a surface configured for receiving a force exerted through the second groove allowing insertion of an article to exert a force on the engageable portion to flexibly deform the engageable portion to disengage separate the engageable portion from the engaging portion, thus, releasing the engagement.
